

Hazardous waste disposal with regular collections

Total legal compliance *and* a hassle free service.

HazTech Schedule is a scheduled collection service designed to meet your hazardous waste collection and disposal needs. It can be tailored – both in costs and collection schedules – to benefit the individual requirements of your business.

And it's hassle free!

Once you have decided on the wastes to be collected and the frequency of collections, we do the rest. We automatically collect your waste and you don't need to call us to arrange this. Annual costs are agreed in advance and billed in regular, fixed amounts.

It's an easy way of dealing with all hazardous waste materials including oils, filters, batteries, solvents and other related items.

Your choice

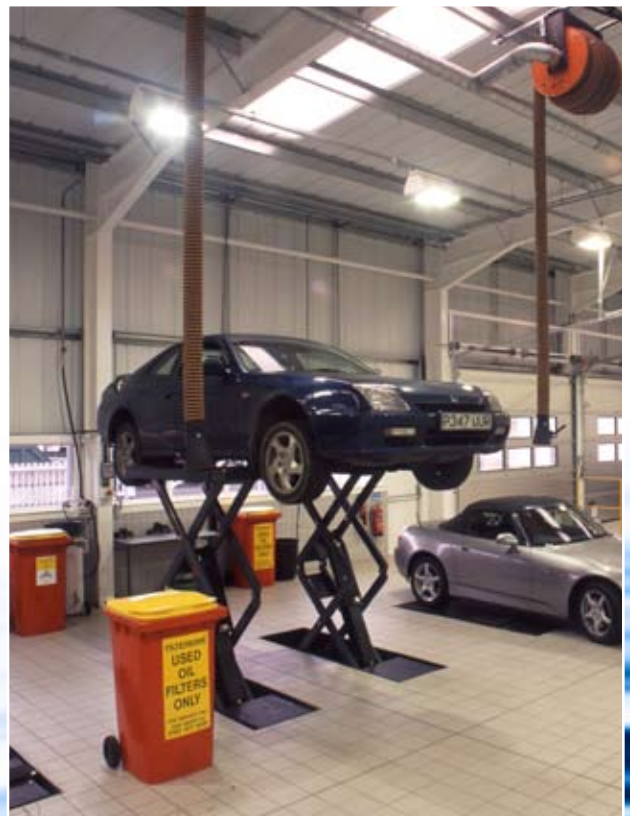

At the start of the contract you decide:-

- the types of waste you need to have collected
- the number of containers you need for each waste type
- the frequency of collections you require

Flexible costs

As part of the HazTech Schedule service we work with you to decide the most cost-efficient solution for your business. This could be fewer waste containers with more regular pickups or more waste containers with infrequent pickups – whatever works best for you.

Our sales team uses a formula to apply charges for each waste type against the number of containers and the collection frequency to give you the best possible rates.

To get an exact cost, for more information or to set up a collection contract, call our sales team now on 0870 2401 055.

Flexible approach

The HazTech Schedule service is also flexible enough to be adapted whenever your needs change.

If your business produces more waste than you were expecting we can either review your collection schedule or add in a one-off collection. You simply call our Customer Services.

Most wastes can be covered by the scheduled collections however bulk quantities of waste oil over 500 litres are collected separately as and when required.

Note. It is illegal to mix different types of hazardous waste materials or mix with non hazardous waste. The disposal charges apply to the collection of correctly segregated wastes stored in OSS supplied containers and drums. Mixed wastes will incur additional disposal charges.
