

Clean pure solvent all the time

The OSS Type 501 parts washer. Unique benefits:

- Solvent always 100% clean
- Minimum waste residue
- Waste residue does not need separate collection/ disposal
- 75 litre solvent tank only needs monthly top-up
- Low cost rental
- Low operational costs

Thanks to its self contained micro-refinery, the OSS Type 501 doesn't need to be emptied and refilled. The unit incorporates a cleaning system in which used solvent passes through a distillation process that removes dirty residue.

This can be drained off once a week and the 75 litre solvent tank simply topped up on a monthly basis.

Major advancement on other models on the market.

The Type 501 parts washer moves away from the sink and drain method where the solvent is dirty after the first wash and where the total content of the tank has to be emptied and replaced.

Type 501 Product details.

- Overall dimensions. H68" x W32" x D27". (Standard sink)
- Working height. 34"
- Solvent tank capacity. 75 litre
- Construction. Heavy gauge steel
- Choice of 240-volt or 110-volt power
